

Who can be a Scientist?

Anyone has the potential to be a scientist! Scientists come from all over the world, from lots of different backgrounds, and work in many different places! In fact, having a big mix of people and lots of diversity in a team makes them better at solving problems. This is because if everyone has grown up in the same place, and at the same time, they will all have very similar experiences and having different experiences will give people different ideas.

Use the research sheet on the next page to learn all about a scientist working in an area that you are interested in. This could be something like animals, space, chemistry or anything else at all!

You can use one of the scientists shown on this page or those featured on [Dynamic Earth Online](https://www.dynamicearthonline.co.uk) as a starting place, but you may need to do some of your own research too. You can also research any scientist you like - Find someone you are interested in learning about!

Dr Hyat Sindi
Medical Scientist

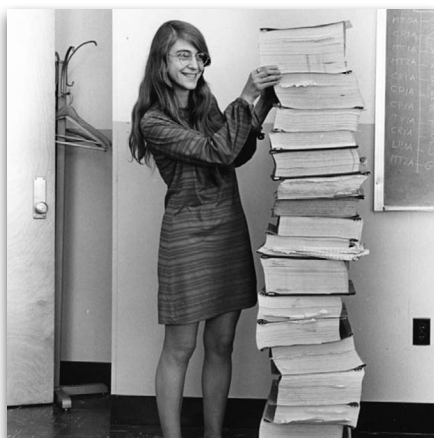

Professor Chris Jackson
Geologist

Cynthia Breazeal
Robotician

Dr Kayla Iacovino
Volcanologist

Margaret Hamilton
Mathematician

Professor Steven Hawking
Physicist and Cosmologist

Scientist Profile

Draw a portrait of your scientist:

Fill in this biography of your scientist:

NAME

.....

DATE OF BIRTH

.....

WHERE ARE THEY FROM?

.....

WHAT KIND OF SCIENCE DO THEY DO?

.....

DID THEY GO TO UNIVERSITY?

.....

Use the box below to write about the big achievements of the scientist you are researching, as well as anything else you think is interesting about them.
