

# Desert Conservation

Unfortunately, many deserts are under threat. Issues such as climate change, invasive species of plants and animals, and land erosion mean that these biomes need our help.

## 10 Deserts Project

In the Australian desert, people from indigenous groups across the country have come together to protect their land.

### Some of the things the 10 Deserts Project aims to do:

- Support and train teams of rangers
- Manage wildfires
- Control invasive plants and pests
- Manage eco-tourism
- Help Indigenous communities share their knowledge of the land to help conservation efforts

## So What Can We Do to Help?

One of the biggest threats to deserts (and many other biomes!) is climate change, and the things we do at home can have a big impact across the world!

One of the main causes of global warming and climate change is the increasing carbon dioxide levels in the air, so it makes sense that taking some of that carbon dioxide out would help, right?

The good news is we can help do this by planting trees! Trees take in carbon dioxide and use it to help them grow! Check out [this activity](#) that shows a fun way to measure how much carbon is stored in the trees around you!

If you have a garden, one of the best things you can do to help the deserts – and the entire planet – stay healthy is to plant some trees. Our friends at the Eden Project have a list of 10 British Trees to grow in your garden, so why not have a look and get green-fingered in the garden this summer!
